

User, administrator, and systems operator

Production capability list for procurement, architecture review, and commercial licensing.

Website: <https://justrunit.io> · **Email:** justrunit.io@gmail.com · **Phone:** [318-232-2280](tel:318-232-2280) (leave a message; we will call back)

1. Application user / operator

Catalog	Browse jobs, workflows, schedules in visible workspaces
Run	Run jobs and workflows (OPERATOR role); view status and logs
Authoring	Create/edit definitions in managed workspaces (personal owner or group manager)
Scheduling	Cron schedules; human-readable cron descriptions
History	Search/filter executions; failure reason and log detail
Recovery	Cancel work; requeue orphaned executions when permitted
UX	Workspace filter, dark/medium/light themes, paging and search

2. Administrator

Visibility	All workspaces, definitions, and executions
Users	Create, enable/disable, roles, passwords, delete
Groups	Create group workspaces; manage membership roles
Platform workspace	Company-shared definitions

Security	Local auth modes; OIDC SSO configuration and role mapping
Agents	Register, monitor, remove agents
API	Full administrative REST access

3. Systems operator

Runtime topology	Multi-node app tier, PostgreSQL, agent workers, scheduler lease
Execution modes	Local (in-process) or agent (distributed claim)
Docker Compose	Postgres + HA app nodes + agents
Kubernetes	Helm chart (server, agents, optional Postgres)
Health & metrics	Actuator health/readiness, metrics, Prometheus
Notifications	Optional SMTP email on failure/success
Artifacts	GIT_RELEASE cache directories on server/agent hosts

4. Agents & federation (all roles context)

Placement	Agents run on customer-owned hosts; outbound to control plane
OS	Linux and Windows (same agent distribution)
Pinning	Preferred agent name selects execution host
Hostname	Display metadata only; not a routing address

Workspaces Team-scoped catalogs on one control plane
