

Production workload automation control plane

Define jobs and workflows, run them on federated agents where your files live, schedule execution, observe failures, and secure access with roles and workspaces.

Commercial product, available now. Just Run It is offered under production licenses for organizations ready to run automation on their estate.

Why customers choose Just Run It

- **Run where files live** — federated Linux/Windows agents on hosts you control
- **Production job types** — COMMAND (real shell), HTTP, GIT_RELEASE binaries, workflows, cron
- **Operate with confidence** — execution history, logs, cancel/kill, orphan recovery, optional email
- **Multi-team governance** — workspaces, RBAC, optional OIDC SSO, audit attribution
- **Known deploy paths** — Docker Compose HA, Kubernetes/Helm, bare metal/VM

What ships

- Web UI control plane and REST API
- Jobs: COMMAND (shell), HTTP, NOOP, GIT_RELEASE (release asset download + execute)
- Workflows with step conditions and restart from failed step
- Cron schedules for jobs or workflows
- Out-of-process agents (Linux, Windows, container hosts)
- Personal, group, and platform workspaces for multi-team use
- Local RBAC (VIEWER / OPERATOR / ADMIN) and optional OIDC SSO
- Execution history, cancel/kill, orphan recovery, optional email notifications
- Deploy via Docker Compose, Helm/Kubernetes, bare metal/VM, or sandbox JAR

Federated production use

- **Control plane** — one shared HA deployment for multiple teams

- **Workspaces** — personal and group isolation of catalogs; admin full visibility
- **Agents** — installed on team systems; preferred agent pins jobs to the right host

Technology baseline

- Java 21, Spring Boot, Thymeleaf UI
- PostgreSQL for production deployments; H2 for local sandbox
- Docker multi-stage builds; Helm chart for Kubernetes

Commercial licensing

Production licenses are available now. Contact us for pricing, agent sizing, and go-live planning:
